SUMMARY

Master's student in Cyber Security with interests in Cyber Security, Automation, Front-End Programming, and Web Development/Security. Actively seeking full-time entry-level roles to apply my knowledge and make a meaningful impact.

EDUCATION

Eastern Michigan University, Ypsilanti, MI

Started Fall 2025

Master's in Cybersecurity

Eastern Michigan University, Ypsilanti, MI

Dec 2025

Bachelor's in Computer Science

WORK EXPERIENCE

Ford Motor Company

May 2023 - Aug 2023

Internship in In-Vehicle CyberSecurity

Dearborn, MI

As a CyberSecurity CMA (CAN Message Authentication) Engineer, developed a high-quality, scalable Python program to organize breadboard data from CAN (controller area network) logs, enabling efficient analysis of overnight data.

- Refined data processing workflows using Python to optimize performance and accuracy.
- Presented analytical findings on CAN log data to guide team decision-making and improve data navigation.

Argo AI

May 2022 - Aug 2022

Internship in Cyber/Product Security

Pittsburgh, PA and Allen Park, MI

Collaborated on evaluating AI L4 software to understand sensor integration and vehicle system performance.

- Participated in test track activities in Pittsburgh to assess software reliability in real-world conditions.
- Researched historical vehicle cybersecurity breaches and prepared presentations highlighting key vulnerabilities.
- Tested various programs to identify and fix software errors, working closely with the manager and software team.
- Assisted in developing a tablet application for vehicle data collection, demonstrating proficiency in programming languages.

Tenacium DC, U.K.

Jun 2020 - Aug 2020

Internship in Cyber Security

Remote (Based in London, UK)

Collaborated remotely with the team and management in the U.K. to learn about CyberSecurity basics.

- Researched different topics in CyberSecurity.
- Learned about cybersecurity laws in Europe and the USA.
- Presented findings in a paper to management.

UNIVERSITY PROJECTS

Senior Project: Social Media App (Strategy/Front-end Program Lead)

Eastern Michigan University

- Responsible for the design and development of a full-stack social media application
- Made use of HTML, CSS, JS, and Node.js for frontend and backend development, utilizing Firebase for authentication and database operations
- Focused on user experience, privacy, and engagement features such as direct messaging, friend system

Health App with Chat Bot (Front-end Program Lead)

Eastern Michigan University

- Built a responsive website that allows people to check for cardiovascular or neurological symptoms
- Developed a JavaScript form that submits data to a Spring Boot backend, which uses the OpenAI API to provide users with a preliminary differential diagnosis
- Made sure there is HIPAA-style privacy awareness, with user-friendliness to rely on for accessibility trust
- Worked collaboratively using GitHub to maintain version control and Agile methodology for iterative development

Unity Game Development - Eclipse (Creator/Programmer)

Eastern Michigan University

- Developed Eclipse, a strategic card game integrating deck-building mechanisms in Unity
- Implemented core gameplay in C#: card drawing, turn-based logic, effects, and health/damage systems
- Created friendly UI/UX elements such as player dashboards, rule explanations, and audio toggling to maintain engagement
- Used Plastic SCM for version control and worked on gameplay balance and bug fixes with the team

COMPUTER SKILLS

- Computer Languages: C++, HTML, Java, JavaScript, Python, C#, CSS, SQL Database
- Platform/Framework/Tools: AWS, Unity, GitHub, Spring Boot, OpenAI, Microsoft Azure, Google Cloud

AWARDS

- 2017 FIRST Robotics World Championship
- 2017 FIRST Robotics Festival of Champions
- 2017 US Presidential Award & bronze medal for a volunteer organization
- 2019 FIRST Robotics Michigan State Championship & World Competition Sub-Division

LEADERSHIP EXPERIENCE

Eastern Michigan University Projects (2024-25)

- For my senior project (social media app), I organized a team by assigning responsibility to the individuals based on their skills. Led frontend programming aspects. The coordination and teamwork helped us develop a user-friendly app.
- I led a team of 3 students to develop the frontend of a health app. I also collaborated with the backend lead to connect both the front and backend to create the app.
- I was responsible for designing and creating the idea for a Unity game development for my game design class.

FIRST Robotics Championships (2017-20)

- As a freshman member of the high school robotics team (Team 862 Lightning Robotics), we won the World Championship. Also won the Festival of Champions, which was conducted for world championship finalists.
- As a Junior, we won the State Championship and the world competition sub-division.
- In all 4 years, I showed leadership by helping others to fabricate parts and to build the robot.

US Presidential Award & bronze medal for a volunteer organization (2017)

- I was part of a non-profit charitable organization called VT Seva. I volunteered numerous hours in various activities for this organization. I was the emcee for their annual fundraising event for 3 years to raise funds to help blind school students, women's health, and disaster relief.
- I was recognized for all my volunteer hours with a letter of appreciation and a medal from the President of the United States.

Digital Divas (2025)

- At EMU, the women in computer science club hosted an event for middle school girls for a Python code-along. By collaborating with team members from the club, we taught girls how to program an emoji chatbot.

Mentor and Teacher (2019-22)

- I was a student of a personality development program called "Prajna" through Jeeyar Educational Trust (JET), Michigan Chapter, for 8 years. Prajna, a Sanskrit word, means "Applying Knowledge into Action."
- Through this experience, I became interested in becoming a teacher to shape young minds, ages 4 to 10.
- I taught children for 3 years during my high school and college years.
